Training Courses

Intermediate Python Training Course

by John Pinner
Wednesday 7th November 2012
Venue: Imperial Hotel, Russell Square, London WC1B 5BB

Description: So, you've been programming in C/C++/Java/Perl/FORTRAN/Ruby** for years, and are regarded as a bit of an expert. Now you've 'picked up' Python and got a few programs going, it all seemed easy enough although you were shocked/horrified/mystified** at the differences between Python and your favourite language.

Covers:

Recapitulation • Name spaces • mutability vs immutability • compile-time vs run-time behaviour

Python Functions • Variable numbers of arguments • Python functions are first-class objects • A simple despatch table

Contracts (lack of) and Conventions • Lack of interface/discipline cf [insert language here] • Informal contracts and conventions • 'Duck' typing • Naming conventions

Code Maintainability • Documentation • Avoiding mistakes; code checkers - pychecker - pylint

Unicode - If you think you don't need Unicode, you're probably in denial, face up to it now

Python 2 vs Python 3 • What are the differences ? • Which should I be using?

Multi-Platform applications • Tips for writing multi-platform code • Licensing
Functional Programming with Python • Python functional constructs • List comprehensions • Lexical closures

WTF is Pythonic? • Style – The Zen of Python • PEP 8 – write code like Guido van Rossum • Working with Python, it's not C, C++ or Java, don't try and make it so

Intermediate Perl

12th & 13th February 2013

Advanced Perl

14th & 15th February 2013
